

A Convenient Way to Slash Your Gas Bill

Article by: Michael Milstead

"With oil prices spiraling higher almost every day, people are starting to look for alternative modes of transport," says Michael S. Milstead of Scootertronics. "With scooters, commuters can slash their gas bills and still have an efficient, reliable mode of transport."

With the introduction of four stroke scooters into the market this year even larger savings can be had with these scooters getting 60 to 80 miles per gallon. Four Stroke Scooters are much easier to care for than two stroke scooters with oil added to an oil reserveb just like a car instead of being injected into carb for lubrication. This keeps the carb from getting clogged up plus eliminates the expense of two stroke oil and reduces smoke plus you get a quieter smoother running engine.

The larger 150cc scooters are also making a splash adding the power and speed to to keep up with fast moving traffic. Although 150cc scooters are treated like motorcycles where you need a motorcycle license the 49.5cc scooters in most only require a regular drivers license and no tags in most states.

So if you are looking to slash your gas bills consider a four stroke gas scooter to make your commute not only enjoyable but money saving also.

As the owner and sales rep for www.scootertronics.com Michael Milstead has been providing info and scooters to the public for all kinds of transportation that will give them great savings on thier gas bill each month paying for the scooter in a very short period of time.
