

A K&N FIPK Air Intake Can Help Your Vehicle's Performance And Pickup

Article by: Andrew Bernhardt

More passing power, more towing power and better acceleration. The K&N FIPK (Fuel Injection Performance Kit) smoothes and straightens huge volumes of incoming air, allowing your engine to breathe deep and roar. You'll feel the power across the entire RPM range.

The backbone of the FIPK is the high-flow K&N Filtercharger air filter in K&N's signature pink color. It's washable, reusable, and lasts for the life of your ride. Couple that with the custom crosslink nylon intake tube, and the K&N FIPK Air Intake runs faster and cooler than the competition.

Installation? It's a cinch. K&N packs the FIPK with a complete hardware kit and detailed step-by-step instructions to get the job done in less than an hour and a half. It even mounts to factory locations—no modifications or drilling. And, K&N protects your FIPK Air Intake Kit with a 10-year/1,000,000-mile warranty. Order now, and feel the FIPK difference everywhere you drive.

K&N FIPK air intake user comments:

"With the 5.4L in such a big truck you need the help. This product does the job."

"very easy to install. all needed parts are included. power increase is noticeable. better throttle response. my guess is my mileage has gone up by about 3 to 4 miles a gallon. worth every penny."

"I noticed a big difference in performance, driveability and fuel milage. Also the instructions were very clear with installation being less than 1 hour. I would definately reccomend this product to anyone."The facts seem to point towards the **k&n fipk** as being a top **k&n air intake** on the market to improve performance by boosting throttle response and bumping horsepower for today's car, truck, or SUV driver. – Andrew Bernhardt
