

# A Look At The Function Of Your Car's Suspension And What You Need To Know

---

*Article by: Gregg Hall*

Although the steering and suspension system of a car are very important components of the vehicle, most drivers really don't know much about these things. Most drivers just take for granted the functions of the different parts of their car. In most cases, as long as their cars don't really have some major breakdowns, a lot of drivers really don't bother to acquaint themselves on how the systems of their car works. Why is it important to know how the systems of your car work? There are times when you need to make necessary trouble shooting in your car. If you have some ideas on how the systems of your car work, then it would be easier for you to figure out what is wrong with your car.

When we talk of suspension in your car, we are talking about the springs located in the front and the rear of your car. These springs suspend the "sprung" weight of the vehicle and absorb shocks when you go through some rough surfaces. All trucks and cars have suspension systems that are composed of such components as the sway bars, the shocks and the struts. The suspension system has two main functions; to keep the car firmly on the road and to give you a comfortable ride. On the other hand, the function of the steering system is to let the driver control the course of the car through the steering wheel.

It is very important that the systems of your car are functioning properly. Malfunctioning car systems can often lead to accidents that could cause a lot of damage and possible loss of lives. To be sure that the systems of your car are functioning as they should, one should only go for cars that are proven to be safe and comfortable on the road.

Currently, Ford Motors is one of the companies that have been trusted by clients all over the globe when it comes to cars. For many years, Ford Motors have proven beyond doubt that they only produce vehicles that are reliable and that the state of the art car engineering technology of the company makes its products both safe and comfortable.
