

Car Floor Mats

Article by: Alison Cole

Car floor mats are the coverings that are used on car floors to protect the floor carpet from dust, water, insects, soil and other unwanted particles. Car floor mats also prevent snow and water from soaking through the carpet and rusting the car body. They are also a decorative accessory giving the car a tidy look. Car Floor mats are made by cutting the desired materials according to the size of the vehicle. Basic mats can be enhanced with embroidery, ribbing etc. They are then edged with matching bindings. These mats are chemically treated to reduce humidity, enhance color and maintain it. These mats are subject to a lot of wear and tear as they are in a heavy usage area. Hence, checking their condition from time to time is highly recommended.

Car floor mats are of two types. They are carpet floor mats and all weather car floor mats. Carpet floor mats are available in many colors. They protect the car floor and provide presentable interiors to the car. Rubber floor mats are more durable and tough for extreme weather conditions. Rubber car floor mats are available in standard rubber colors like black, tan and grey. Both types are washable.

Car floor mats are either custom made or semi-custom made. Custom floor mats are made to order in the exact size of the car floor. Individuals can specify the design and color and get mats made to order. Such mats will be a perfect fit for the vehicle. Semi-custom made car floor mats are not made specifically for each vehicle. They come in standard sizes and the size closest to the vehicle floor is used. They are about 90-95% accurate. They are available in the stores and individuals can choose the best option out of the mats available. It is common practice to use removable rubber mats over fixed floor mats. This helps in cleaning and maintaining the mats. Mats provides detailed information on Mats, Floor Mats, Yoga Mats, Car Floor Mats and more. Mats is affiliated with Feather Masks.
