

# Car Stereos

---

*Article by: Ken Marlborough*

Car stereos are stereos that are meant to be installed in cars and enjoyed while driving or riding around the city, along long country roads, or virtually anywhere else. They are seen by many people to be one of the crucial elements to a truly enjoyable ride. Car stereos are specially fitted and shaped to hug the interior of your car or other vehicle, and the sound is balanced so that the car will become the stage for a superior sound. Do not confuse car audio with a car stereo. The car audio refers to the whole sound system found in automobiles. Depending on the preference of the driver, car audios can be or an out-and-out customized delivering an excellent sound quality and listening experience.

Car stereos on the other hand, lie at the heart of the car audio system. The main components are the CD or cassette player, speakers, amplifiers, cables and equalizers.

## What to Look for in Car Stereos

Look for a stereo that will give you unlimited recording and playing options while driving. For excellent sound, you can purchase brand name stereos that have little or no distortion or warped sounds. You can add component that can be self-installed like amplifier racks, subwoofer enclosures or speaker pods.

When choosing a model, you first have to consider if the stereo you intend to buy fits the make and model of your car. Most new, sporty models come with sophisticated stereos complete with video inputs, digital time recorder, etc.

What is important is that you choose the one you know and feel is the right one for you – and your car. Stereos provides detailed information on Stereos, Car Stereos, Stereo Speakers, Stereo Systems and more. Stereos is affiliated with Digital Video Recorders.
