

Cleaning Oil, Grease, Butter, Vegetable Oil, Margarine, Cosmetic Creme Stains From Your Car

Article by: Lance Winslow

One of the worst problems in the cleaning of cars is the wide variety of stains that appear on the seats, carpet and interior. We will discuss the ways to clean such tough stains in car interiors as Oil, Grease, Butter, Vegetable Oil, Margarine, Cosmetic Crème Stains. First off the important thing is to use a Neutral soap or Neutral products with a ph of 7. (PH is measured on a scale of 0-14 for acidity or alkalinity) 7 are in the middle meaning neutral. This way none of the products used will form chemical reactions while using them.

Mobile Auto Detailing and Mobile Car Washes use a variety of trade secrets to clean such stains effortlessly and efficiently and charge quite a bit to do it. The average cost to detail the interior two front seats of a car is \$25.00 plus carpet shampoo of \$25.00.

Some companies recommend certain brands to their mobile car wash teams. The best types of cleaners for these stains are solvent based and should be used carefully. They can combine and make more of a mess if not used properly. Caution is important and a virtue and this is truer in this scenario than in any other part of auto detailing. First clean up the main mess by scraping excess and getting it down to as small an area as possible. Plastic razor blades work good for this. Then gently dab your solvent cleaner on the stain without ripping and it should start to come up. If you get no discoloration from this you can then wipe gently. When you are all completed try using some foam type upholstery cleaner and wipe. Then perhaps some warm water on a rag to finish the job. Lance Winslow - Online Think Tank forum board.
