

Run Your Car On Water, Save Gas!

Article by: D. Crest

These days one of the biggest worries most drivers have in their minds is how much the gallon of gas will cost tomorrow. With the huge increases in oil prices that we have witnessed during the recent months, there have been weeks when there seems to be no limit to the price gas will climb next day and this only means more sacrifices for most drivers that have to adjust their budgets accordingly and spend more of their hard earned money in filling up the gas tank and less on a number of things, with many cases where even food rations must be sacrificed in these extreme cases.

For many years there have been statements about the many advantages and the convenience that hydrogen powered cars would represent for our communities. These cars would run pretty clean, saving us lots of pollution problems, but mainly they would run on a very cheap energy source, this is, you would run your car on water. Saving you those awful gas prices.

To run your car on water may seem crazy for some but you should consider that a hydrogen powered car is less complicated than you think. It would only need a system to contain and break water into hydrogen and oxygen and then inject these gases to a regular engine so it would run "on water", the future is at hand. With just some technical effort we can realistically think about converting our regular car or SUV into a hydrogen powered vehicle that will let us forget about those horrible gas prices that appear every morning in the news. Learn how you can turn your current vehicle into a hydrogen powered car or SUV So You Can Run Your Car On Water. It's simpler than you think:
