

What Do I Need to Know Before Buying a Hybrid Car?

Article by: Peter Wallander

The days of 50 cent gas prices have vanished along with sock hops and soda shops. Now day's gas is closer to \$2.50 a gallon and kids go to raves. What can be done? Are we destined to spend more on gas for a week than we do on groceries? Enter the hybrid car. Every year, more hybrid cars hit the market, and for good reason, consumers today are beginning to demand more fuel efficiency from their cars. If you are interested in purchasing a hybrid car, you are not alone, but you may not know what to look for while car shopping. The following tips will help you plan what you want in a car and how to find it on a lot.

Hybrid car dealers also have their own language, you should know how to speak "hybrid" before you decide to go shopping for one of these vehicles. You will need to know that these cars are, on average, have a 90 percent lower emission rate than traditional cars and are therefore known as Ultra Low-Emission vehicles.

Research is so important when contemplating the purchase of a hybrid car. Thankfully, most people have access to the internet and therefore have access to information such as manufacturers' websites. These websites may be some of the most valuable information that you will find. They will contain information that will lead you to repair shops, vehicle maintenance requirements and other such information that is specific to hybrid cars.

However, if needed, the engines will run simultaneously as well. This will happen if more power is needed than either the electric or combustion engine alone can produce. An example of this type of situation would be accelerating on an expressway.

Before you decide to tackle the hybrid car market, there are some general points of knowledge that you need to be aware of. For example, this type of car is often referred to as a Hybrid Electric Vehicle or HEV. It will have two engines as opposed to a traditional vehicle, which has one. The engines that are found in an HEV are combustion and electric, having the two engines allows the car to switch from one engine to the other when power begins to run low.
