

# Why People Love Hybrid Cars

---

*Article by: JB Anthony*

Today, more and more people are considering the option of buying hybrid cars. An auto enthusiast newbie may find himself asking what it is about hybrid cars that have made it so popular in the auto market in the past few years.

In a nutshell, the advantages of hybrid cars may be summed up in three reasons: economy, efficiency, and sustainability.

## Economy

Hybrid cars use both electric power and fuel power, and uses up much less energy than your ordinary fuel-generated vehicles. Thus, the owner is spared from the constant price hikes and increases in the world oil market. And they are guaranteed to reach their destinations with or without the erratic movements in oil price hikes.

## Efficiency

Since hybrid cars operate and run on electricity, hybrid cars easily function consistently well at any motor speed in comparison to gas-powered engines. As gas-powered engines generate much less power in decreased low revolutions per minute, motor and engine speed is affected considerably. In a hybrid car, the owner need not worry about transmissions and engine revolutions per minute in relation to speed. And although, because of acceleration reasons, a hybrid car may run a bit slower than a gas-powered vehicle making it a disadvantage to some people, parents prefer and opt to buy these hybrid cars for their children, being guaranteed their kids' safe speed on the road.

## Sustainability

Using a car that can run on electricity will definitely have environmental advantages. Environmentalists and ecological activists are thrilled by the idea and by the ability of hybrid cars to emit substantially lesser smog pollutants and other hazardous gasses that are harmful to the environment and to people's health.

With all these advantages in Hybrid cars, and with the rate at which car companies are going in order to develop and innovate on current hybrid car models, it won't be surprising to find the modern household owning at least one hybrid car in the next ten years.

## Efficiency
